

champ de saisie des commandes  
(la validation se fait par la touche entrée)

champ d'affichage des messages du chat

The diagram shows a chat interface within a rounded rectangular container. It consists of two main components: a command input field at the top and a message display area below it. The input field is a horizontal rectangle containing the text '<saisie>'. The message display area is a larger vertical rectangle containing the text '<messages>'. Dashed lines connect the descriptive text on the left to these two components: one line connects 'champ de saisie des commandes' to the input field, and another line connects 'champ d'affichage des messages du chat' to the message display area.
